Portfolio Breakdown HFP Cautious

as at 31 March 2025

Objectives

The objective of this portfolio is to provide a combination of income and capital growth. The portfolio gives limited exposure to capital markets through a diversified range of UK and international investments and aims to achieve above inflation investment returns over the longer term. Equity exposure is likely to range between 30-55% with limited exposure to international investments.

Portfolio breakdown

Holdings	%
UK Fixed Interest	34.00

Discrete 12 month performance to 31 March

	2021	2022	2023	2024	2025	YTD
HFP Cautious	17.24%	5.47%	-4.07%	8.70%	4.34%	-0.28%
IA Mixed Investment 20-60% Shares	20.05%	1.79%	-5.00%	7.80%	3.77%	0.18%

The HFP MPS investment strategy follows the same approach as the Brooks Macdonald Managed Portfolio Service (MPS) strategy of equivalent risk profile. This includes asset allocation, tactical changes and security selection. The HFP portfolios were incepted on 31 October 2022, therefore performance data prior to this date refers to the Brooks Macdonald MPS strategy. Past performance is not a reliable indicator of future results.

MACDONALD

Given a portfolio matched to this asset allocation and given a period of not less than 10 years, we target an annualised nominal rate of return somewhere between 1.30% and 11.65% (50% confidence interval) with a midpoint of 6.47% before deductions for charges and tax liabilities. Assuming a rate of inflation equal to 2.0%, we could see an annualised 'real' midpoint rate of return around 4.38%.

Of course, there is a great deal of uncertainty about these returns. For instance, we predict routine fluctuations in nominal values, in any one 12-month period, between -6.37% and 19.74% (50% confidence interval) with much greater potential for loss during unusually poor market conditions. Indeed, annual fluctuations could vary between -15.56% and 28.93% (90% confidence interval) during comparatively unusual conditions.

Potential risk and returns - Barclays Equity Gilt study

Shown in this graph is the distribution of performance based on nominal return data for UK equities, gilts and cash between 1900 and 2021.

Cumulative performance - PIMFA Income

Cumulative performance of the PIMFA Income benchmark to 31/03/2025.

Historical peak-to-trough losses - PIMFA Income

Shown in this graph is the performance of the PIMFA Income benchmark since inception and the periods which the portfolio would have been 'underwater' – times where the portfolio failed to gain value. This is highlighted in grey. Cumulative performance of the PIMFA Income benchmark to 31/03/2025.

Looking back at performance over the life of the PIMFA Income benchmark, there was a period in the run up to March 2009, experienced a maximum peak to loss trough of -23.06% .

There is no reason to believe that a decline in value of that magnitude, or greater, could not be repeated.

Note also, that the same benchmark may have spent as long as 2 years and 1 month 'underwater' – that being the longest single period since the start of the benchmark data, that the portfolio has failed to gain in value.

Important information

Investors should be aware that the price of investments and the income from them can go down as well as up and that neither is guaranteed. Past performance is not a reliable indicator of future results. Investors may not get back the amount invested. Changes in rates of exchange may have an adverse effect on the value, price or income of an investment. Investors should be aware of the additional risks associated with funds investing in emerging or developing markets.
